

Weather *contingency*

We have been tracking the anticipated weather conditions for the peak trading period – due to the increased likelihood of snow this year we have made the following provisions.

- 150 weather contingency trailers on standby across the country.
- Proactive gritting at all sort centres and largest service centres.
- Stockpile of grit, shovels and personal protective equipment is already in stock across all sites.
- City & rural service split in key cities e.g. Aberdeen to allow isolation and continuity of service.
- The Business Control Tower is monitoring anticipatory weather conditions in real time and will proactively communicate to clients as weather changes and if adjustments need to be made in the event of adverse weather.

25 tonne of grit
onsite already
